ROLE
You are a senior motorsport researcher and technical writer. You are building the master knowledge base for a Formula 1 chatbot. The document must work as the single sc

Preview: Part B (Sections 5 to 9)

Part B covers tyres, power units, calendar and circuit profiles, points systems, and the current 2026 season status.

SECTION 5. TYRES

Pirelli serves as the sole tyre partner for the FIA Formula One World Championship through the 2027 season, with an additional one-season extension option. Formula 1 utilizes 18-inch wheels, low-profile sidewalls, and standardized wheel arches.

Pirelli Dry Compounds, Intermediates, and Full Wets

Pirelli manufactures five slick compounds in the C-range, spanning C1 (hardest) to C5 (softest), in addition to dedicated wet-weather specifications.

Compound	Sidewall Color Marking	Hardness Grade	Target Working Window	Degradation & Wear Profile
C1	White (when selected as Hard)	Hardest	High temperature (>30°C track)	Very low thermal degradation; high mechanical resistance
C2	White (as Hard) or Yellow (as Medium)	Hard-Medium	Medium-High (25°C–38°C track)	Balanced wear; resists graining on high-load circuits
C3	White, Yellow, or Red (depending on nomination)	Medium	Wide / Versatile (20°C–35°C track)	Linear degradation; serves as baseline performance tyre
C4	Yellow (as Medium) or Red (as Soft)	Medium-Soft	Low-Medium (15°C–28°C track)	High initial grip; susceptible to thermal overheating
C5	Red (when selected as Soft)	Softest	Low working range (15°C–25°C track)	Rapid peak grip drop-off; vulnerable to surface graining
Intermediate	Green	Intermediate Wet	Damp surfaces; standing water up to 2 mm	Disperses ~30 L/s at 300 km/h; wears rapidly on dry lines
Full Wet	Blue	Extreme Wet	Heavy standing water / aquaplaning conditions	Disperses ~85 L/s at 300 km/h; tread blocks overheat on drying tracks

Tyre Selection and Condition Decision Guide

Track Condition / Scenario	Recommended Compound	Operational Rationale
High Surface Temperature (>40°C)	Hardest nominated slick (C1/C2)	Mitigates carcass blistering and rear traction thermal degradation.
Low Surface Temperature (<20°C)	Softest nominated slick (C4/C5)	Facilitates rapid tyre warm-up into the chemical grip window.
High Abrasiveness / High Lateral Load	C1 or C2	Prevents rapid structural tread wear in sustained high-g corners.
Low-Grip Street Circuit	C4 or C5	Generates micro-conformity mechanical grip on smooth, polished asphalt.
High Degradation Surface	Hardest nominated slick	Prioritizes thermal stability over short-run single-lap pace.
Light Rain / Damp Surface	Intermediate (Green)	Channels light surface film without overheating dry-line rubber.
Heavy Rain / Standing Water	Full Wet (Blue)	Evacuates water volume to eliminate high-speed aquaplaning risks.
Drying Track (Intermediate Crossover)	Slick (Nominated Soft or Medium)	Transition window triggers when intermediate lap times degrade past slick warm-up pace (~112% dry time).
Early Safety Car Window (Laps 1–12)	Hold Track Position / Stay Out	Stint extension prevents excessive tyre degradation in later race phases.
Mid-to-Late Safety Car (Free Pit Stop Window)	Fresh Slicks (Soft/Medium)	Pit loss reduced under neutralized delta; compound delta offsets track position.

Regulations and Stint Rules

Sole Supplier & Dimension Standards: Pirelli contract runs through at least 2027; tyre size standardized at 18-inch wheel rims (245/640-18 front, 325/710-18 rear).

Dry Weekend Allocation: Each driver receives 13 sets of dry-weather tyres per standard Grand Prix weekend: 2 sets of Hard, 3 sets of Medium, and 8 sets of Soft.

Mandatory Race Compounds: Pirelli mandates two specific slick sets for the race; drivers must use at least two different dry specifications during a dry race (FIA Sporting Regulations, Article 30.5).

Tyre Blanket Rules: Electric tyre heating blankets operate under strict FIA limits (70°C maximum temperature for dry blankets). Full Wet tyres operate without blanket pre-heating.

SECTION 6. ENGINES / POWER UNITS

The Formula 1 Power Unit (PU) utilizes a hybrid powertrain combining an internal combustion engine with electrical energy harvesting and recovery systems.

Basic Architecture and Components

Internal Combustion Engine (ICE): A four-stroke, 90-degree V6 with 1.6-liter displacement. Fuel injection is direct, with pressure limited to 350 bar. The ICE produces approximately 400 kW (~536 bhp) under current fuel flow caps.

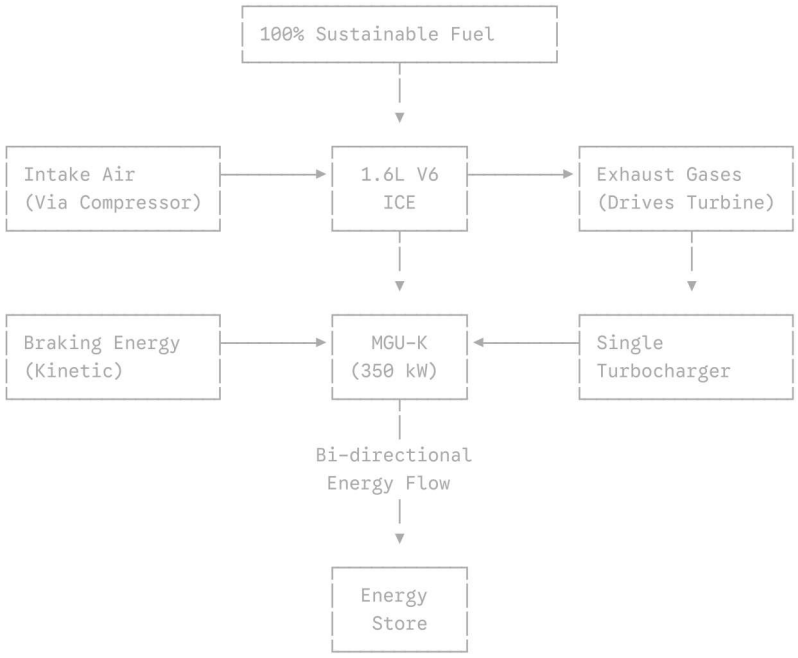

Single Turbocharger (TC): Exhaust-driven turbine powering a compressor to force compressed air into the engine intake.

Motor Generator Unit – Kinetic (MGU-K): Mechanically coupled to the crankshaft. Recovers kinetic energy under braking and deploys up to 350 kW (~469 bhp) to drive the rear wheels.

Energy Store (ES): Lithium-ion battery system storing recovered electrical energy.

Elimination of MGU-H: The Motor Generator Unit – Heat has been fully removed from the technical framework, simplifying PU architecture and eliminating thermal exhaust recovery costs.

100% Advanced Sustainable Fuels: Engines run exclusively on second-generation non-food bio-based or synthetic e-fuels with net-zero carbon impact.

Historical Engine Eras (1950 to Present)

Era	Years	Engine Formula	Key Characteristics
Early Grand Prix Era	1950–1953	4.5L naturally aspirated / 1.5L supercharged	Front-engine roadster dominance (Alfa Romeo, Ferrari).
2.5L Formula	1954–1960	2.5L naturally aspirated / 750cc supercharged	Mid-engine transition pioneered by Cooper; Mercedes straight-8 dominance.

Era	Years	Engine Formula	Key Characteristics
1.5L Era	1961–1965	1.5L naturally aspirated	Compact V6 and V8 engines; chassis integration focus.
3.0L "Return to Power"	1966–1985	3.0L atmospheric / 1.5L forced induction	Emergence of the Ford Cosworth DFV V8; introduction of Renault turbo (1977).
First Turbo Era	1977–1988	1.5L turbocharged	Qualifying boost levels exceeding 1,400 bhp; fuel consumption restrictions.
3.5L Atmospheric Era	1989–1994	3.5L naturally aspirated (V8, V10, V12)	Turbos banned; pneumatic valves and high-revving electronic controls.
3.0L V10 Era	1995–2005	3.0L naturally aspirated V10	Engine speeds exceeding 19,000 RPM; exotic metallurgy, screaming sound profile.
2.4L V8 Era	2006–2013	2.4L naturally aspirated V8 (18,000 RPM rev limit)	Engine freeze implementation; introduction of KERS (60 kW) in 2009.
V6 Turbo Hybrid Era	2014–2025	1.6L V6 Turbo + MGU-K (120 kW) + MGU-H	Peak thermal efficiency exceeding 50%; fuel mass flow capped at 100 kg/h.
High-Output Electric Hybrid	2026–Present	1.6L V6 Turbo + 350 kW MGU-K (No MGU-H)	50/50 power split ICE/electric; 100% sustainable fuels; 3,000 MJ/h energy cap.

Power Unit Suppliers and Customer Alignments

Manufacturer	Base Location	Works Team	Customer Teams
Mercedes-AMG High Performance Powertrains	Brixworth, United Kingdom	Mercedes-AMG PETRONAS F1 Team	McLaren, Alpine, Williams
Scuderia Ferrari	Maranello, Italy	Scuderia Ferrari	Haas F1 Team, Cadillac F1 Team
Red Bull Ford Powertrains	Milton Keynes, United Kingdom	Oracle Red Bull Racing	Visa Cash App Racing Bulls
Audi	Neuburg an der Donau, Germany	Audi Revolut F1 Team	None (Full Works Manufacturer)
Honda Racing Corporation (HRC)	Sakura, Japan	Aston Martin Aramco F1 Team	None (Exclusive Works Deal)

SECTION 7. THE CALENDAR AND CIRCUITS

The Formula 1 World Championship features a 23-round calendar (reduced from 24 following the cancellation of the Saudi Arabian Grand Prix at Jeddah; Bahrain round relocated to Sepang, Malaysia).

Grand Prix Calendar

Rnd	Official Grand Prix Name	Circuit	City	Country
01	Australian Grand Prix	Albert Park Circuit	Melbourne	Australia
02	Chinese Grand Prix	Shanghai International Circuit	Shanghai	China
03	Japanese Grand Prix	Suzuka Circuit	Suzuka	Japan
--	Saudi Arabian Grand Prix	Jeddah Corniche Circuit	Jeddah	Saudi Arabia
04	Miami Grand Prix	Miami International Autodrome	Miami Gardens	United States
05	Canadian Grand Prix	Circuit Gilles Villeneuve	Montreal	Canada
06	Monaco Grand Prix	Circuit de Monaco	Monte Carlo	Monaco
07	Barcelona-Catalunya Grand Prix	Circuit de Barcelona-Catalunya	Montmeló	Spain
08	Austrian Grand Prix	Red Bull Ring	Spielberg	Austria
09	British Grand Prix	Silverstone Circuit	Silverstone	United Kingdom
10	Belgian Grand Prix	Circuit de Spa-Francorchamps	Stavelot	Belgium
11	Hungarian Grand Prix	Hungaroring	Mogyoród	Hungary
12	Dutch Grand Prix	Circuit Zandvoort	Zandvoort	Netherlands
13	Italian Grand Prix	Autodromo Nazionale Monza	Monza	Italy
14	Spanish Grand Prix	Circuito de Madrid (MADRING)	Madrid	Spain
15	Azerbaijan Grand Prix	Baku City Circuit	Baku	Azerbaijan
16	Bahrain Grand Prix in Malaysia	PETRONAS Sepang International Circuit	Sepang	Malaysia
17	Singapore Grand Prix	Marina Bay Street Circuit	Singapore	Singapore

Rnd	Official Grand Prix Name	Circuit	City	Country
18	United States Grand Prix	Circuit of the Americas	Austin	United States
19	Mexico City Grand Prix	Autódromo Hermanos Rodríguez	Mexico City	Mexico
20	São Paulo Grand Prix	Autódromo José Carlos Pace (Interlagos)	São Paulo	Brazil
21	Las Vegas Grand Prix	Las Vegas Strip Circuit	Las Vegas	United States
22	Qatar Grand Prix	Lusail International Circuit	Lusail	Qatar
23	Abu Dhabi Grand Prix	Yas Marina Circuit	Abu Dhabi	UAE

Circuit Technical Specifications

Circuit	Length (km)	Laps	Race Distance (km)	Turns
Albert Park	5.278	58	306.124	14
Shanghai	5.451	56	305.066	16
Suzuka	5.807	53	307.471	18
Miami	5.412	57	308.326	19
Montreal	4.361	70	305.270	14
Monaco	3.337	78	260.286	19
Barcelona	4.657	66	307.236	14
Red Bull Ring	4.318	71	306.452	10

Circuit	Length (km)	Laps	Race Distance (km)	Turns
Silverstone	5.891	52	306.198	18
Spa-Francorchamps	7.004	44	308.052	19
Hungaroring	4.381	70	306.630	14
Zandvoort	4.259	72	306.587	14
Monza	5.793	53	306.720	11
MADRING (Madrid)	5.474	56	306.544	20
Baku	6.003	51	306.049	20
Sepang	5.543	56	310.408	15
Marina Bay	4.940	62	306.143	19
COTA (Austin)	5.513	56	308.405	20
Hermanos Rodríguez	4.304	71	305.354	17

Circuit	Length (km)	Laps	Race Distance (km)	Turns
Lusail	5.419	57	308.611	16
Yas Marina	5.281	58	306.183	16

Historical Calendar Expansion

1950–1959: 7 to 11 races per season

1960–1979: 10 to 17 races per season

1980–1999: 14 to 17 races per season

2000–2019: 17 to 21 races per season

2020–Present: 22 to 24 races scheduled per season

SECTION 8. POINTS SYSTEM

Championship classifications are governed by FIA Sporting Regulations, awarding points to finishers in Grands Prix and Sprint events.

Current Points Allocation (Grand Prix and Sprint)

Position	Grand Prix Race Points	Sprint Race Points
1st	25	8
2nd	18	7
3rd	15	6
4th	12	5
5th	10	4
6th	8	3
7th	6	2
8th	4	1
9th	2	0
10th	1	0
Fastest Lap Point	Abolished (No points awarded)	N/A

Shortened Race Points Scale (FIA Sporting Regulations, Article 6.5)

Race Distance Completed	1st	2nd	3rd	4th
Under 2 racing laps	0	0	0	0
2 laps to 25% distance	6	4	3	2
25% to 50% distance	13	10	8	6
50% to 75% distance	19	14	12	10
Over 75% distance	Full points awarded (25-18-15-12-10-8-6-4-2-1)			

Complete History of F1 Points Systems (1950–Present)

Era	1st	2nd	3rd	4th
1950–1953	8	6	4	3
1954	8	6	4	3
1955–1957	8	6	4	3
1958	8	6	4	3
1959	8	6	4	3
1960	8	6	4	3
1961	9 (Drivers) / 8 (Const.)	6	4	3
1962–1965	9	6	4	3
1966–1968	9	6	4	3
1969–1978	9	6	4	3
1979	9	6	4	3
1980	9	6	4	3
1981–1990	9	6	4	3
1991–2002	10	6	4	3

Era	1st	2nd	3rd	4th
2003–2009	10	8	6	5
2010–2013	25	18	15	12
2014	25	18	15	12
2015–2018	25	18	15	12
2019–2024	25	18	15	12
2025–Present	25	18	15	12

Championship Tie-Break Rules (FIA Sporting Regulations, Article 7)

If two or more drivers or constructors conclude the championship with equal points, the tie is resolved by:

1. Highest number of first-place finishes (wins).
2. Highest number of second-place finishes.
3. Highest number of third-place finishes, progressing down through all finishing positions until the tie is broken.
4. If still tied, the FIA nominates the winner based on criteria determined by the World Motor Sport Council.

SECTION 9. CURRENT SEASON REPORT

As of October 29, 2026 (following Round 18, the United States Grand Prix at Circuit of the Americas)

2026 Drivers' Championship Standings

Pos	Driver	Number	Team	Points
1	Andrea Kimi Antonelli	12	Mercedes	365
2	George Russell	63	Mercedes	242
3	Lewis Hamilton	44	Ferrari	241
4	Max Verstappen	3	Red Bull Racing	236
5	Charles Leclerc	16	Ferrari	233
6	Lando Norris	1	McLaren	211
7	Oscar Piastri	81	McLaren	144
8	Isack Hadjar	6	Red Bull Racing	105
9	Liam Lawson	30	Racing Bulls	77

Pos	Driver	Number	Team	Points
10	Pierre Gasly	10	Alpine	42
11	Arvid Lindblad	41	Racing Bulls	38

Championship Storylines and Title Mathematics

Antonelli on the Verge of Championship: Andrea Kimi Antonelli holds a 123-point lead over teammate George Russell with 5 Grands Prix remaining. With 125 maximum standard

points left (no fastest lap point), Antonelli needs just 3 points (or finishing 8th or higher) at the Mexico City Grand Prix to clinch the 2026 World Drivers' Championship.

Eliminations: Max Verstappen, Charles Leclerc, and Lando Norris have been mathematically eliminated from Drivers' title contention. Lewis Hamilton trails by 124 points with 125 on the table.

Constructors' Championship Battle: Mercedes leads Ferrari by 133 points. Red Bull Racing and McLaren remain tied for 3rd position at 355 points apiece.

Next Race Preview: Round 19 – Mexico City Grand Prix

Dates: 2026-10-30 to 2026-11-01

Circuit: Autódromo Hermanos Rodríguez, Mexico City, Mexico

Track Length: 4.304 km (71 laps, 305.354 km distance)

Recent Venue History: Dominated historically by Max Verstappen (record 5 wins at venue). Altitude of 2,285 meters presents unique cooling and aerodynamic efficiency challenges.

Weekend Session Timetable:

Session	Date	Local Time (CST, UTC-6)	UTC Time
Practice 1	Friday, 2	Give this in Downloadable PDF and markdown file . Downloadable here in chat so I can download.	
Practice 2	Friday, 2026-10-30	16:00 – 17:00	22:00 – 23:00
Practice 3	Saturday, 2026-10-31	11:30 – 12:30	17:30 – 18:30
Qualifying	Saturday, 2026-10-31	15:00 – 16:00	21:00 – 22:00
Grand Prix	Sunday, 2026-11-01	14:00	20:00

I will generate the Formula 1 Master Knowledge Base (Part B: Sections 5 to 9) as a clean Markdown document (`f1_knowledge_base_part_b.md`) and an interactive HTML document (`f1_knowledge_base_part_b.html`) configured with an automatic browser print/save-to-PDF button so you can download or print both formats immediately.
